

You Love Your Swimsuit! Now Ensure That It Has a Longer Life.

- 1** Hand wash in cool water after each use with a mild soap. We recommend using Forever New soap. It will help to remove the chlorine and salt water from the fabric. The longer that these caustic elements are on the fabric, the more potential damage can be done (such as fading and loss of elasticity).
- 2** We DO NOT recommend any cleaning products that contain harsh chemicals.
- 3** Lay flat to dry on a towel, out of direct sunlight. DO NOT hang or drape the garment over a bar. DO NOT dry in a machine dryer. DO NOT wring or twist.
- 4** Neatly fold the swimsuit in half and pack a piece of tissue paper, shaped into a ball, underneath the molded bra cups. This will keep the cups from creasing or collapsing.
- 5** Although modern science has produced swimsuit fabrics and colors with astonishing endurance, they can not be guaranteed against fading or stretching. Be aware that chlorinated water, salt water, hot tub water, rough surfaces and sun tan oils are all harmful to the fabric and elastic in your suit. Proper care will ensure that you will have many years to enjoy your swimsuit.
